

Measuring just 8mm thick, lightweight, and mountable directly to walls like traditional wallpaper, Samplex’s wallpaper screen is an ultra-thin panel that leverages core innovations—including its direct-drive display architecture, aerospace-grade material integration, and low-voltage safety design—to deliver advantages like low power consumption, high refresh rates, customizable modular sizing, and hassle-free installation.

Versatilely suited for diverse spaces—from high-end banquet halls and home theaters to commercial showrooms and conference rooms—it breaks through the spatial limitations of conventional display devices while redefining spatial aesthetics with the ethos: “what you see is decor; decor is display.” This cements it as a revolutionary display solution that seamlessly merges functional display capabilities with polished spatial ambiance.

Since its debut, the wallpaper screen has earned numerous domestic and international awards—a clear testament to the industry’s widespread recognition of Samplex’s pioneering innovation in the display technology sector.

Project Case Introduction

THE WORLD'S THINNEST MOUNTABLE LED WALLPAPER SCREEN - ULTRA-LIGHT & ULTRA-THIN
